

360-Degree Disinfection

# ELECTROSTATIC CLEANING

## The Clean You Need Now.

COVID-19 has business owners and property managers seeking an advanced comprehensive cleaning solution that delivers superior services and protection. Jidan Cleaning's electrostatic spray technology combined with Spartan disinfectants will reach and kill pathogens on all surfaces in your workplace. Here are the FAQs.

### What is electrostatic disinfection?

Electrostatic sprayers distribute EPA approved and hospital-grade disinfectants by dispersing them through an electronically charged tip. Each droplet becomes positively charged and then seeks out surfaces in our negatively charged world. The attraction is so strong that the charged particles will even reverse direction and move upwards against gravity to coat hard-to-reach surfaces to kill COVID-19 and other infectious diseases.

### Why do you need this level of clean?

The CDC is recommending that businesses perform enhanced cleaning and disinfection in light of the current pandemic. Many facilities, particularly health care, have already been relying on electrostatic cleaning to fight pathogens. It is now clear that electrostatic cleaning can benefit every facility by providing a thorough clean on a variety of surfaces.

### Is it safe?

Yes. We've partnered with Spartan products to utilize their EPA approved hospital-grade disinfectants that are proven effective against the human coronavirus and many other bacteria, viruses, and fungi. Electrostatic spraying also requires reduced amounts of chemicals because it's more efficient than conventional methods so it's more cost effective. Our staff has received extensive training on the use of electrostatic cleaning equipment and procedures with an emphasis on pandemics.

### How long does it take?

Our service reduces the time required to disinfect by up to 50% when compared to conventional methods. We can cover 40,000 square feet of building space per hour.

### Where is this service available?

We currently provide this service in Pennsylvania, New Jersey, and Maryland.  
Most common locations are:

**Healthcare Facilities**

**Schools**

**Office Buildings**
